VI—LAND SETTLEMENT

No. 27—Occupation of Land

Particulars	Area	Area
I—Absolutely Alienated :— Area sold by public auction or other forms of direct sale or otherwise alienated up to 30th June, 1961	acres	acres
	27,786,699
II—In Process of Alienation at 30th June, 1961 :— Free Homestead Farms	326,002	
Conditional Purchase	11,318,219	
Selections under the Agricultural Lands Purchase Act	264,244	
Grazing Land	845,424	
Town and Suburban Lots	3,494	
Crown Grants of Reserves	72,445	
		12,829,828
Total Area alienated or in process of alienation at 30th June, 1961	40,616,527
III—Leases or Licenses in Force at 30th June, 1961 :— Issued by— Lands Department : Pastoral Leases	220,128,193	
Special Leases	4,608,621	
Leases of Reserves	869,901	
Residential Lots	4,564	
Perpetual Leases	1,495,824	
Mines Department : Gold-mining Leases (a)	18,098	
Mineral Leases (b)	40,401	
Miners' Homestead Leases	33,375	
Forests Department : Timber Permits (c)	4,011,966	
		231,210,943
IV—Area neither Alienated, in Process of Alienation, nor Leased	352,761,330
Total Area of Western Australia	624,588,800

(a) Excludes 518 acres on "Private Property." (b) Excludes 2,626 acres on "Private Property." (c) Includes Permits for cutting Wandoo for tanning purposes, amounting to 153,014 acres, but excludes Permits and Licenses for cutting timber and firewood in Goldfields areas.

No. 28—Principal Crown Land Transactions—Area of Crown Land for which Applications have been approved by the Lands Department

(a) Includes Free Homestead Farms and Reserves.

VII—PRODUCTION

No. 29—Estimated Net Value of Western Australian Production

For Primary Industries, net value of production is derived by deducting all marketing costs and the value of goods used in production (seed, fertilizer, pickling, sprays, dips, fodder, fuel and oil, etc.) from the value realized "at the principal market." For Manufacturing, it is obtained by deducting the value of goods consumed in the process of production (i.e., materials used, fuel, power and light, lubricating oil and water, repairs to plant and buildings, tools replaced and containers and packings) from the selling value "at the factory door."

Year	Agricultural	Pastoral and Trapping (a)	Dairy, Poultry and Bee Farming	Forestry and Fisheries	Mining and Quarrying	Total Primary	Manufac- turing

§ Annual Declaration. (a) Defined for basic wage purposes as the area comprised within a radius of 15 miles from G.P.O., Perth. (b) As defined in the Land Act but excluding the Metropolitan Area. (c) Rates for divisions shown not specifically declared by Court. (See *letterpress in June, 1942, issue*.) (d) Relates to certain specified Goldfields Districts only. (e) Rates declared in Basic Wage Adjustment and Order No. 1 issued under the authority of National Security (Economic Organization) Regulations. (f) Beginning of first pay period. (g) Beginning of next succeeding pay period. (h) Interim Basic Wage declaration authorized under amendment to National Security (Economic Organization) Regulations, operative first pay period after date thereof. (i) Special determination incorporating increase of £1 for males and 15s. for females. (j) Female rate increased to 65 per cent. of male rate as from 1st December, 1951. (k) Female rate increased to 75 per cent. of male rate from beginning of first pay period commencing on or after this date.

No. 46—Notes on the Rainfall and General Weather Conditions in Western Australia during April, May and June, 1961

April

General—The northward movement of pressure systems in April enabled southern depressions to play an important part in the month's rainfall but the most beneficial source, and one that brought splendid opening rains to the agricultural districts, was an extension southward of tropical low pressure in the middle of the month. These influences raised the month's total well above the average particularly in the north-eastern wheat belt.

Southern low pressure extended well northward over the State at times and produced excellent rains in the south-west and south-coastal areas, but falls were light inland and it was not until the 14th that tropical low pressure brought good rains from the Fortescue southward.

Anticyclones followed a normal track across the southern part of the State, but nevertheless were responsible for subnormal day temperatures over most of the State although night readings were slightly above the April mean.

Rainfall—Splendid falls occurred generally from the Fortescue southward between the 13th and 16th, amounting to four to six inches in the northern and north-eastern wheat belt. Where previously southern depressions had caused very light to light falls, at most places in these districts totals were raised several times above the April normal with the advent of tropical low pressure over the central areas of the State. Many stations received unprecedented 24-hour registrations.

Southern low pressure had already brought excellent falls to the south-west and south-coastal areas and southern districts, so that the combination of southern and tropical low pressure resulted in above-average rainfall generally south of the tropics, except for parts of the West and East Gascoyne. Totals were many times the April normal in the northern and north-eastern wheat areas.

In the tropics, although the April totals were for the most part below the normal some good individual falls were received, exceeding an inch and ranging up to three inches in the Kimberley and Fortescue divisions.

The West and East Gascoyne divisions received more favourable falls, practically the whole region reporting above normal totals with recordings of one to two inches. Falls of over three inches were reported from a number of station properties.

Temperature—Day temperatures outside the tropics were below normal during the month due, for the most part, to anticyclonic influences which at times extended well over the State. Night temperatures on the other hand were above the normal April reading except in the Gascoynes and in the North and Central Coastal districts.

Maxima in the Kimberleys and De Grey were particularly high in the first half of the period when Fitzroy Crossing experienced temperatures of 106° on the 2nd and 108° on the 14th, Wyndham 102° on several occasions and 103° on the 12th, and Marble Bar 103° on several days and 104° on the 3rd.

In the tropics night temperatures were above average except in the Fortescue and high readings were reported from Derby where the temperature did not fall below 84° (12° above normal) on several days. At Halls Creek the minimum of 84° on the 14th was 21° above the normal minimum. At Broome the temperature did not fall below 80° from the 5th until the 18th and on the 14th a minimum temperature of 84° was experienced, 12° above the April normal. The lowest night reading during the month was 38° at Wandering on the 22nd.

Metropolitan—Rain fell on 16 days and, with a total of 386 points, Perth received the highest April rainfall since 1954 and experienced the wettest Easter for 4 years. This brought the total rain since the 1st January to 624 points, almost twice the normal.

Both the daily minimum and the daily maximum temperatures were below normal, the highest reading being 80·8° on the 25th as against a normal of 76·1°, while the lowest night temperature of 45·6° on the 22nd was nearly 12° below normal.

Although the wind on the whole was moderate during the period and the mean daily run was much less than usual, a gust of 50 m.p.h. was recorded on the 20th.

May

General—High pressure was the main weather control during May and on only three occasions was the anticyclonic ridge across the State broken to any extent. The first was on the 9th when a southern depression formed off the south-west coast and during the next several days extended northward over most of the western half of the State south of the tropics. On the 16th a tropical trough along the west coast produced good falls of rain in the southern tropics and in the Gascoyne districts. Southern low pressure again became active as the trough filled but the system moved rapidly across the southern areas and falls of rain, which extended to the lower agricultural districts, were disappointingly light and scattered.

Rainfall—With the exception of Onslow, where two inches fell in one day, and a few other isolated places, mainly pastoral properties in the Fortescue and the West Gascoyne, the rainfall in May was below normal throughout the State.

The best falls were received in parts of the Fortescue, the West Gascoyne and, particularly, in the central west and south-west coastal areas, the latter being due to the passage of southern depressions or the prolongation of southern low pressure influences. These latter rains extended to a very limited extent to the lower agricultural districts and the whole of the wheat belt was anxiously awaiting rain at the end of the month.

Temperature—With the exception of the East Kimberley and Fortescue divisions maximum temperatures were above normal throughout the State during May. In southern parts the mean maximum exceeded the normal by as much as 5° and 6° at places and 4° and 5° over a considerable area. Minima however were not so marked and most districts, although above normal, showed small variations while many closely approximated normal conditions.

The west and south-west coastal divisions were above normal and in the South Coastal subdivision both the night and day temperature readings exceeded the normal by 3° to 4°.

A few frosts were experienced late in the first week when the temperature fell to 32° at Wandering on the 6th and 33° at Wandering and Bridgetown on the 9th.

Metropolitan—With the remainder of the South-West division the metropolitan area experienced a mild approach toward the winter and both maximum and minimum temperatures were above normal during the period.

The mean of the day temperatures was 3.1° above the average but the minimum was only 0.4° in excess.

The main feature in Perth however was the mild nights and for the first time since records commenced 64 years ago the May minimum failed to fall below 48.4°.

Rain fell on only six occasions and totalled 236 points, less than half the normal expectation.

Although strong winds were experienced on the evening of the 10th, and the early morning of the 11th when gusts reached 52 m.p.h., the mean daily wind run of 150 miles was as much as 40 miles short of the May average.

June

General—Between the 1st and 15th southern low pressure operated freely causing general rain from the Fortescue division southward and, with the formation from time to time of secondary depressions, strong winds to gales over the south-west of the State. Rough to very rough seas were experienced on the coast from Shark Bay southward and over the ocean areas to the west and south.

On the 16th there was a sudden change to high pressure control and until the 26th any rain that fell was restricted to the south coastal areas. Frosts, severe at times, became a daily feature over most of the State south of the tropics.

There was a second northward surge of southern low pressure on the 26th and rain again fell over southern parts of the State between then and the end of the month.

Rainfall—Deep and, at times, intense southern activity carried rain well northward to the Fortescue division in the early part of the month and falls of over an inch were received at pastoral properties in this and the Gascoyne divisions with above average totals at a number of places.

South of the Gascoyne districts all divisions received splendid falls and these extended to the eastern wheat belt and goldfields. There were few places in these regions which did not receive the normal June rainfall, the exceptions being a large area of the Central Coastal sub-division and parts of the central wheat belt.

Unfortunately the nature of the rain precluded benefit to much of the eastern divisions, the northern wheat belt and the Eucla division while a large section of the South-Eastern division received light falls which were insufficient to bring totals up to the June average.

Temperatures—Maximum temperatures were above normal in June in all divisions of the State and minimum temperatures were also above normal except in the North and West Kimberley.

These abnormalities were due mainly to the conditions in the first half of the month when temperatures in the tropics rose 10° to 15° above normal and several stations exceeded the previous highest June temperature on record.

In southern regions, stations which should, in ordinary circumstances, be reporting frosts were experiencing minima 10° to 15° above the June average while maxima were 4° to 6° above average.

With the change in the middle of the period to anticyclonic control, temperatures dropped appreciably and frosts were reported over wide areas as far north as Nullagine. These were severe at times, the temperature falling to 24° —at Forrest on the 24th and at Wandering on the 26th. The ground temperature at Corrigin fell to 20° on the 26th.

Despite the cold nights maximum temperatures in the south-west of the State rose again in the third week and many stations reported day temperatures just short of 70° .

The highest maxima were experienced in the tropics where Talgarno reported 99° (17° above normal) on the 12th.

Metropolitan—In common with adjacent areas in the south-west of the State the weather in the metropolitan area was most unusual. Both the maximum and minimum temperatures were above normal at Perth, falling below the average on only nine days. On three days the temperature reached or exceeded 70° . Night readings exceeded the normal on 15 occasions, at times failing to fall below 60° while the lowest was 40.6° .

The nature of the weather pattern provided the second longest dry spell and also the second longest wet spell, with 623 points falling on 19 days. Due to the lengthy period of cloudless days the number of hours of sunshine during the month exceeded the normal by 33.

Strong gusty winds at times gave a maximum of 62 m.p.h. on the 6th but on a number of occasions heavy gusts exceeding 50 m.p.h. were experienced.

XVI—BUILDING OPERATIONS

No. 51—New Buildings Completed

The figures in this table cover the operations of all builders who accept contracts for the construction of new buildings, "day labour" building by governmental agencies and the activities of "Owner-Builders." The term "Owner-Built" refers to buildings actually erected by the owner or under the owner's direction without the services of a contractor who is responsible for the whole job.

The value of land on which the buildings were erected is not included in the values shown.

XVIII—MOTOR VEHICLE REGISTRATIONS

In Western Australia there is no single authority responsible for the licensing of vehicles. The Traffic Branch of the Police Department issues licences in the Metropolitan Traffic Area, which comprises the whole of the Metropolitan Statistical Division and that part of the Swan Division consisting of the Shires of Cockburn, Gosnells, Kwinana and Rockingham in their entirety and parts of the Shires of Armadale-Kelmscott, Mundaring and Swan. Outside the Metropolitan Traffic Area the Town or Shire Council is responsible for the licensing of vehicles in its own district.

Total, Census, 30th June, 1947	258,076	244,404	502,480	124,767	2,606	127,373

(a) For Census purposes, an occupied "dwelling" is defined as any habitation occupied by a household group living together as a domestic unit, whether comprising the whole or only part of a building. The term "unoccupied" is not synonymous with vacant houses and flats available for occupancy, but refers mainly to "week-end," holiday and other dwellings whose usual occupants were temporarily absent on the night of the Census. Newly-completed dwellings awaiting occupancy are also included.

(b) Persons (both passengers and crew) not enumerated elsewhere who spent Census night on ships, long-distance trains or aircraft.

XIX—MISCELLANEOUS

The following table shows the results of the experiments conducted on the 15th and 16th of May 1900. The first column gives the number of the experiment, the second column the time taken for the reaction to take place, the third column the amount of gas evolved, and the fourth column the temperature of the reaction mixture.

The results show that the reaction takes place more rapidly at higher temperatures, and that the amount of gas evolved is greater at higher temperatures.

Experiment	Time taken for reaction to take place	Amount of gas evolved	Temperature of reaction mixture
1	1.2	1.5	25.0
